

Pluton

Halogen

Downlights

Pluton type fixtures in combination with suspended ceilings are completely resistant to dust and pressurized water from below although they are IP 54 protection class when bare. These units are applicable in applications that require decorative and visual qualities although humidity, dust and contamination are unavoidable. They are recommended for bathrooms, fringes and balconies. The sand tempered glass on the unit distributes the light beam evenly to create a more comfortable setting.

HALOGEN DOWNLIGHTS / PLUTON (M 1671)

M 1671

Description

Sealing: 2 mm thick elastic gasket places between the front frame and the suspended ceiling to ensure resistance to leakage.
